

ROLLCHAT HOW DOES IT WORK

Revision 1

EVERYTHING...

1. Introduction

One of the XXI. century's greatest achievements is the ease of communication between people, regardless of age, sex, and geographical location. It began with telephony, continued with mobile phones, and now it's moving towards Internet-based communication. ROLLCHAT© is one step further this road: it will let people communicate on their mobile phones, but without the costs of mobile communication. ROLLCHAT© is combining the advantage of PC-based chat solutions, where communication has no separate costs, and people can connect to many other people at the same time, with the advantage of the mobile solutions, which can be used anywhere and anytime. ROLLCHAT© is a chat solution running on a mobile phone, and people using it can chat with each other, regardless of age, sex, and location.

2. Basics

When using ROLLCHAT, you meet the following components:

- ROLLCHAT© Client, running on your mobile phone or PDA
- ROLLCHAT© Terminal, running at the ROLLCHAT© spot, e.g. restaurant, café, lounge, etc.

You are using your mobile phone or PDA to chat. The ROLLCHAT© Client uses your device's Bluetooth connectivity to connect to the ROLLCHAT© Terminal. Before you do anything with ROLLCHAT©, this is the first step: to connect to a ROLLCHAT© Terminal.

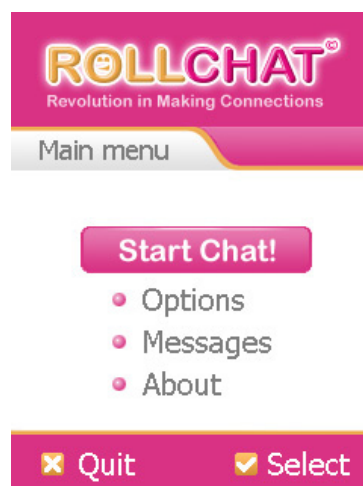

3. Obtaining the ROLLCHAT© Client

When you enter a ROLLCHAT© area, a logo will encourage you to enable Bluetooth on your mobile phone or PDA. After you did so, your device will soon indicate that the Terminal is sending you a message, and will ask for confirmation to receive it. Accept the message, and wait until it is downloaded.

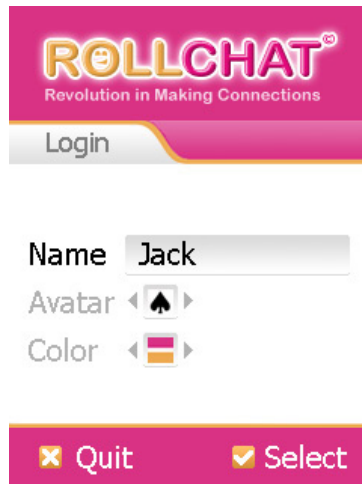

The message will contain the ROLLCHAT© Client, so you have to install it. Please consult your device's user manual for instructions on installing an application. Most devices ask for confirmation, and then automatically install the application. Some devices will ask where to put the application's icon, but some devices automatically put it into the Applications folder.

4. Chatting with ROLLCHAT©

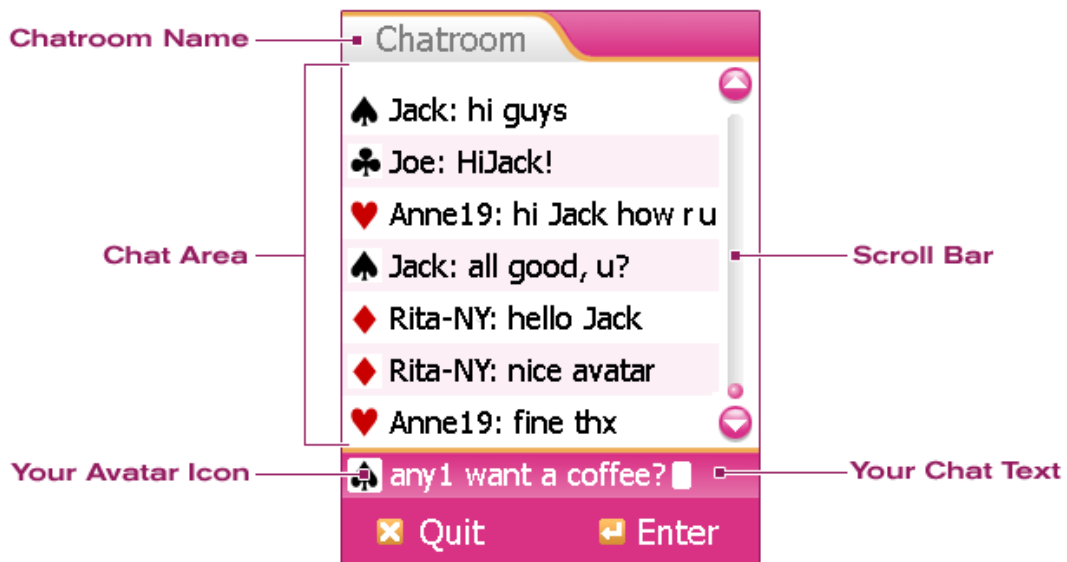

After you've installed the ROLLCHAT© Client, you are ready to chat. No further registration is necessary. To start the ROLLCHAT© Client, select its icon on your mobile phone or PDA, and activate it. The Client will start up, and present you with the Main Menu. Select Start Chat! from the main menu. The Client will look for ROLLCHAT Terminals nearby. It will show you the list of available Terminals, so you can choose the appropriate one, which is associated with the place you are at. For example, if you are at a café called "Café and Chat", the appropriate Terminal will be named something very similar to this.

After you've chosen the appropriate Terminal, you will be presented with a login screen. Here you have to specify your nickname, your icon (avatar), and your colors. These will identify you to other chatters, because your icon and name will appear before each line you enter. Similarly, you will be able to identify other chatters by their name and avatar.

After you have logged in, you will automatically be put into the main chat room. You will see the last couple of lines of chat in the room, so that you can immediately join the conversation. The name of the chatroom will be displayed on top of the window, under it you will see the chat area with the chat lines. Right next to it you will see the scrollbar, with which you can scroll back. On the bottom, you will see your chosen icon, and the text you're typing.
